(a) DC current and power provide a clear severity ordering
Normalised DC quantity (% of sequence healthy state)
Shaded area on one cell (%)
Isc, sequence 1
Pmp, sequence 1
Isc, sequence 2
Pmp, sequence 2
(b) No single EIS feature remains monotonic over the full range
Normalised EIS feature (% of sequence healthy state)
Shaded area on one cell (%)
Rp, sequence 1
-Z''max, sequence 1
Rp, sequence 2
-Z''max, sequence 2
PS100 is shown as a regime / validity change, not as a monotonic calibration point.
(c) Stronger shading increasingly challenges measurement consistency
Mean IK--K residuall (%)
Shaded area on one cell (%)
Sequence 1
Sequence 2
Additional PS75 retest
PS100
