(a) A weaker second fault adds little to the DC response
Normalised DC quantity (% of A75B0)
Second-cell shaded area, B (%) [A fixed at PS75]
I_sc
P_mp
(b) Incremental impedance change grows as B becomes restrictive
Normalised EIS feature (% of A75B0)
Second-cell shaded area, B (%) [A fixed at PS75]
R_p
-Z''_max
R_s
B100: n = 0.865, mean |K--Kl = 1.42%
(c) Selected spectra reveal the major B100 regime change
Imaginary impedance, -Z'' (Ω)
Real impedance, Z' (Ω)
B0
B50
B75
B100
