(a) Terminal DC response becomes comparatively insensitive
Normalised DC quantity (% of healthy)
Number of PS75 cells
N = 4 → 9:
ΔP_mp = -6.1%
ΔI_sc = -4.6%
I_sc
P_mp
(b) Impedance continues evolving over the same region
Normalised EIS feature (% of 4-cell state)
Number of PS75 cells
R_p
-Z''_max
N = 4 → 9:
ΔR_p = +63.4%
Δ(-Z''_max) = +62.2%
(c) Representative Nyquist evolution
Imaginary impedance, -Z'' (Ω)
Real impedance, Z' (Ω)
Healthy
1 cell
4 cells
6 cells
9 cells
(d) A sustained two-relaxation description emerges
ΔBIC = BIC_M3 - BIC_M2
Number of PS75 cells
Strong preference guide
sustained strong preference
